MEMORANDUM FOR: NSA/TCO 25X1A
ATTENTION: [REDACTED]
THROUGH: [REDACTED] NSA/LO/NPIC
SUBJECT: Chinese Shipyards and Port Facilities
REFERENCE: Requirement No. [REDACTED] NPIC Project
No. 12037-64 (Partial answer)

In response to the reference requirement, the attached material
is forwarded herewith:

Pre-release of Detailed Photographic Interpretation
Report, "Lu-shun-kou Complex, China".

[REDACTED]
Colonel, USA
Assistant for Photographic Analysis, NPIC

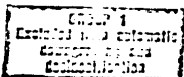

Attachment:
As stated above

FIG 2 OF 4

SECRET

KU-SHUN-KOU NAVAL BASE AND SHIPYARD

Lu-shun-kou Complex, China

25X1A

The Lu-shun-kou Complex, China [] is located on the southern coast of the Liao-tung Pan-tao (peninsula) which extends between the Po Hoi (Gulf of Chih-li) and the Korean Bay at 38-48N 121-16E. This area is also known as Port Arthur.

25X1A

25X1A

The port complex is located along the southwestern coast of the urban area and is divided in 3 separate units: the Naval Base and Shipyard [], the Submarine Base [] and the Port Facilities. This report will deal only with these units of the port complex and will make no attempt to include either the area coastal defense installations or surrounding naval activity. Only those vessels, not thought to be assigned to these bases, will have notations under the status column. All other vessels will be assumed to be in an operational status and home ported here.

The port facilities (Figure 2) are located along the northeastern shore of Hsi Chiang (Bay) and consist of 2 piers, 1 L-Head pier, 1 small T-Head pier, 1 offshore wharf and a quayed area. One small pier was removed during the period of comparative coverage. Only vessels that have a military conotation will be listed under the port facilities and no attempt will be made to identify the numerous tugs, yard craft and barges.

25X1D

Two wharves and two piers have rail and road access, however, the rail spurs appear to be utilized mainly for the supply of coal to the area rather than the transfer of stores and supplies at dockside. All remaining facilities have road access. A possible program of harbor improvement may have been taking place as of [] as a dredge is located offshore from the port facilities. It can not be determined if the dredge is in operation.

The Naval Base and Shipyard (Figure 3) is located on Tung-Chiang (Bay) and surrounds the bay except for the entrance/exit. Facilities consist of 2 graving docks, 3 building/repair ways, 1 pier, 1 T-Head pier, 1 mole, and numerous quayed areas. Handling facilities consist of 3 portal jib cranes. Five buildings and 2 rows of 5 horizontal tanks each were removed during the period of comparative coverage while 9 buildings and 2 rows of 7 horizontal tanks each were added. The horizontal tanks may be the same tanks as those removed, however, they are in a different location.

25X1B

~~SECRET~~

~~SECRET~~

This base and shipyard is used almost exclusively for the repair and modification of vessels. Expansion of facilities in this yard is in progress in the southeastern section with 6 new buildings constructed during the period of comparative coverage and large amounts of building material in open storage.

The Submarine Base (Figure 4) is located along the southern coast of Hsi Chiang (Bay) and along the Lao-hu-wei Pan-tao (Peninsula). Facilities consist of 4 piers. This base is divided into 2 areas with the operations area being on the north coast of the peninsula and immediately adjacent to the water while the support area is located in the middle of the peninsula and connected to the operations area by road.

Only minor changes have taken place at this base with 15 buildings constructed and 6 tent-like structures with possible solid walls have been removed.
